TEXT:

Internet radio company Audio Highway has launched an audio-on-demand Web site which it claims will enable broadcast quality radio rather than the ham radio quality currently available on the Web. The company has developed technology and partnerships to enable broadcast quality radio to be transmitted over the Internet onto a personal computer running the AudioWiz browser extension or specially designed hardware called the listen-up player. Audio Highway is providing quality content from the likes of National Public Radio, Associated Press, CNET, Newsweek On Air, and Penguin AudioBooks. The idea is to give customers a personalised radio service which is free of charge and can be assembled from a number of sources. The radio service is being funded by 3 minutes of personalised advertisements per hour of radio time downloaded. The hardware, which along with the service has been in development since 1994, will cost \$300 for a unit, PC docking station and cables, and car cassette connector. It is approximately the size of a Pager and contains 12MB of flash memory, and custom Application Specific Integrated Circuits designed by Sycom Technologies LLC. The products incorporate a four to one compression algorithm which enables the listen-up player to store one hour of audio content. By the end of the year the player will incorporate a text to speech converter to enable the reading of electronic mail, and the recording of voice messages. Cupertino, California-based Audio Highway, an entirely privately held and funded company with 140 shareholders was founded in September 1994, with the name Information Highway Media Corp, by the president and chief executive Nathan Schulhof, previously founder and chief executive of TestDrive Corp which created software to encrypt applications onto CD-ROM. The audio highway service was initially scheduled for full launch in September 1995, but the company, originally cable-orientated, discovered the Internet and thus the service has been delayed two years. Audible Inc is another company experimenting with the same idea, with product also due in September. Schulhof sees Audible as a "direct competitor". The PC Web plug-in is available at www.audiohighway.com.

New Web Site Containing Thousands of Entertaining, Informative and Useful

Audio Selections is Now Open

CUPERTINO, Calif., Aug. 7 /PRNewswire/ -- Audio Highway(TM), the creator of personalized, audio-on-demand technology for the mobile marketplace, today launched its news and information programming service via its new World Wide Web site, <http://www.audiohighway.com>. Audio Highway also announced that its introductory product, the Listen Up(TM) Player, will be available in stores in late September.

"Today is an important day for Audio Highway," said Nathan Schulhof, president and CEO of Audio Highway. "After more than three years of work and preparation, we are taking the first big step in launching our mobile news and information service. All the expectations and anticipation for Audio Highway's service will certainly be met or exceeded once users test the quality and abundance of available programming."

The launch of Audio Highway's new Web site allows interested users to take a trial-run of the service free of charge. Once connected to the site, users can register online, download Audio Highway's software, AudioWiz(TM), for free and begin receiving user-selected audio content directly to their PCs. Once on their PCs, content can be played back over its speakers. Additionally, with Audio Highway's Listen Up(TM) Player, users will be able to play back the downloaded content in a mobile environment, which is the key element of its audio system.

Schulhof said the new Web site will give users a good indication of the benefits offered by Audio Highway's news and information service. "Even without the Listen Up Player, people are capable of doing everything but playing back content over the player. This means they can peruse, select and download content to their PCs; test the AudioWiz software, and most importantly, see how easy it will be to listen to content they are interested in."

The Listen Up Player is a small, hand-held, digital device designed to deliver personalized audio content to the mobile market. With the Listen Up Player and an Internet connection, consumers can select news and information, music, entertainment, stock quotes, and other content from a variety of topics and download those selections to their Listen Up Player using Audio Highway's new World Wide Web site and its proprietary software, AudioWiz.

The audio selections available through Audio Highway's Web site are free of charge, regardless of whether they are played back on a PC or through a Listen Up Player, via an advertising-supported pricing model. For each hour of downloaded content, Audio Highway will distribute six minutes of audio commercials. However, users may also choose to adopt a pay-as-you-go pricing format, totally eliminating commercial messages from the downloaded content. Download times for Audio Highway's audio content are determined by the speed of a user's connection to the Internet.

"We anticipate most users will have an Audio Highway connection at home where they will download the latest news and information they want in the middle of the night so they can listen to it as they commute to work or go out for their morning jog," Schulhof said. "Additionally, we expect many users will also download content at work."

"Since most business Internet connections are much faster than the standard 28.8 speeds, many users will connect just prior to going home and

will receive the most up-to-the-minute information available. And it will be on just the topics that interest them; that's what's truly exciting about the Audio Highway news and information programming service."

Audio Highway also announced today that the Listen Up Player will be available in stores in late September and will sell for a suggested retail price of \$299, with an estimated street price of \$199. Audio Highway is taking orders through its web site or its toll-free phone number,

800-77LISTEN. The entire Listen Up package includes the Listen Up Player, AudioWiz software, docking station and pass-through parallel port cables.

Currently, Audio Highway has partnerships with a number of notable content providers including The Associated Press, Brite Voice Systems, CNET, Enso, National Public Radio, Newsweek, Penguin Books and others offering users a virtual bookshelf of audio content. More content providers will be added as Audio Highway's service gains in popularity.

Formed in 1994, Audio Highway is a developer of audio-on-demand products, focusing on the mobile environment. Audio Highway is partnering with content providers to allow customers to choose, retrieve, store and play back audio content using both Internet and broadband delivery systems. For more information, interested parties can contact the company at 408-255-5301 or 800-77LISTEN, or visit its World Wide Web site at (<http://www.audiohighway.com>).

Audio Highway, Listen Up and AudioWiz are all trademarks of Audio Highway.
